V1->V2

- Fixed a possible race in `cpu_cgroup_read_stat`. Thank you Paul for pointing this out.
- A few other naming changes.

This patchset is a first step towards implementing stats for cgroup subsystems. Only a few trivial stats for cpu and memory resource controller have been implemented for now. Please provide comments on the general direction and any suggestions on how you would like the cgroupstats framework to be implemented.

roadmap

implement a generic statistics framework for cgroups,
unification with taskstats/netlink interface,
add more statistics
