Subject: Multiple interfaces and subnets on HN

---

I have a HN with two physical network interfaces connected to two subnets. I want VE's to have addresses in both subnets. I read through the extensive and confusing wiki article on using private IP's for Hardware Nodes, but it's not clear what I need to do to accomplish what I want.

Can I just have two venet interfaces per VE? If so, are the routing tables taken care of automatically?
