Subject: Re: Multiple interfaces and subnets on HN
Posted by dahas on Mon, 07 Apr 2008 22:06:10 GMT

VE is like direct connected and don't need special ip rule to pass the HN.
Imagine a tower and each floor represent a VE machine but all use the same exit or enter to the building. Exit and enter represent the networks adapters.
At least using venet adapter.

P.S. When using 2 ip-s or more inside VE don't forget when You try to ping to select the correct interface it's happened to forget that
so try ping a.b.c.x -I a.b.c.d
