On the node:
vzctl exec <<VZID>> /sbin/MAKEDEV ptyp
vzctl exec <<VZID>> /dev/MAKEDEV tty
vzctl exec <<VZID>> /dev/MAKEDEV pty

That didn't work. From another thread I ended up creating a new VE from the same template, then disabled udev in the current
VE's private folder - /vz/private/1001/etc/rc.sysconfig - and then copied the /dev folder from the new VE to the current one

The temp error: I should not know.
It looks as if it's no longer there, so create a new /var/tmp...

Frans

It was actually there, but as file, and not a folder - odd. I've deleted it & recreated it
