I need that fix too

Im using Git compiled version of kernel too.

At uname -r i get this

2.6.24-core2

That I wish to name my kernel i guess must me another way to find if the kernlel is openvz compatible or not like looking in /proc/config.gz on modern kernel version you can find the setting for OpenVZ specific kernel.

Thanks

P.S if is a patch you can atach to this post only if his size not past 2Mb
