Hi to all,

Is it any possibility to run vps.script after networking start in VE guest on Host server.

I'd like to set some parameters on a host on veth.<veid> but this available only after starting.

I see that there is <veid>.mount script but it starts before networking

Is it some <veid>.net or something like that to do the job ?

Best Regards,

Georgi

P.S.:

My version of vzctl is 3.0.22-5 on Debian

Kernel version is : Linux OpenVZ 2.6.18-fza-028stab053.5-amd64
