Hi folks,

I enabled second level quota for one of my VPSes and could use edquota or repquota just fine.
However, quotastats does not work, here is its output

[root@ultra ~]# quotastats
quotastats: Can't read stat file /proc/sys/fs/quota/lookups: No such file or directory
quotastats: Can't read stat file /proc/sys/fs/quota/drops: No such file or directory
quotastats: Can't read stat file /proc/sys/fs/quota/reads: No such file or directory
quotastats: Can't read stat file /proc/sys/fs/quota/writes: No such file or directory
quotastats: Can't read stat file /proc/sys/fs/quota/cache_hits: No such file or directory
quotastats: Can't read stat file /proc/sys/fs/quota/allocated_dquots: No such file or directory
quotastats: Can't read stat file /proc/sys/fs/quota/free_dquots: No such file or directory
quotastats: Can't read stat file /proc/sys/fs/quota/syncs: No such file or directory
Kernel quota version: 6.5.1
Number of dquot lookups: -1
Number of dquot drops: -1
Number of dquot reads: -1
Number of dquot writes: -1
Number of quotafile syncs: -1
Number of dquot cache hits: -1
Number of allocated dquots: -1
Number of free dquots: -1
Number of in use dquot entries (user/group): 0

It's not a big deal, I just want to know if that is normal with OpenVZ?

Thanks,

Nam Nguyen.
