Working kernel is stable on Centos 5.1 amd64:

```
Linux openvz 2.6.18-53.1.14.el5 #1 SMP Wed Mar 5 11:37:38 EST 2008  
x86_64 x86_64 x86_64 GNU/Linux
```

And nonworking is:

```
ovzkernel-ent-2.6.18-53.1.13.el5.028stab053.10 (amd64) too.
```

Hardware is multiprocessor fujitsu-siemens blade unit (PRIMERGY
BX600S2D) about three year old server system.
