Hello,

some more questions, please.

1. have you got any messages from the PAE 028stab53.10 kernel during it's boot time? Does it never boot?
2. ovzkernel-2.6.18-53.1.13.el5.028stab053.10.i686 boots normally but from time to time there is kernel panic.

Could you possibly provide us with more information may be via serial console or netconsole.
