Subject: Re: Kernel Panic OpenVZ install failed No module it8213
Posted by whatever on Mon, 21 Apr 2008 12:38:14 GMT

1. yum install vzkernel-enterpirse

2. Server did not boot after I modified the boot sequence

3. Yes I got same error of kernel panic in both the kernel.

4. Can memtest be run from ssh or I have to make bootable iso?

5. Please provide me your email id or any other way to send you the login details.

This is second time I got kernel panic. I got this panic 2 months before also and I was told it's listed in bugzilla.

Thanks
