
Subject: `vzmigrate` (3.0.22) destroy the source, even `-r no`

Hi,

I found a strange thing with `vzmigrate`.
When I migrated a VE to an other node, the process destroyed the source,
even I specified to keep the original one.

I patched `/usr/sbin/vzmigrate` to avoid the legendary missing `']'`.
I did not download the git version, because as I browsed the changelog,
I did not find this problem in the descriptions.
(Anyway, this commit should win the competition:

It is really good ;)

Well, let's see the complete process (documentary):

```
fujitsu / # vzlist -a
  VEID   NPROC STATUS IP_ADDR
HOSTNAME
  100     - stopped 10.0.1.100

OPT:-v

```

The version of vzctl:

```
fujitsu / # eix vzctl
[I] sys-cluster/vzctl
  Available versions: 3.0.18-r1 3.0.22 {bash-completion logrotate}
  Installed versions: 3.0.22(10:37:34 02/03/08)(logrotate
-bash-completion)
  Homepage:      http://openvz.org/
  Description:   OpenVZ VE control utility
```

My question, is this a new bug or I missed something?

Cheers,
István
