1. There is debian-4.0-i386-minimal.tar.gz OS template here
<http://download.openvz.org/template/precreated/>. Please try it.
2. Please show /proc/user_beancounters output.
3. Please check the packages md5's that contains "grep","mv" binaries. ("rpm" has -V option
"dpkg" should has something similar).
4. Please provide us with the output of the following commands:

```
-vzctl create VE_ID --ostemplate debian-4.0-i386-minimal
-vzctl set VE_ID --ipadd x.x.x.x --save
-vzctl set VE_ID --nameserver x.x.x.x --save
-vzctl start VE_ID
- vzctl enter VE_ID
```
