Subject: problem building fedora core 5 cache
Posted by Colin Campbell on Fri, 05 May 2006 03:01:31 GMT

Hi,

I didn't download the Fedora Core 5 snapshot, preferring to build the OS
template cache from scratch. The only problem is that I get the
following error:

Transaction Check Error: file /etc/named.conf conflicts between
attempted installs of caching-nameserver-7.3-5.FC5 and bind-9.3.2-20.FC5
ERROR: yum failed with 1 exit code

which obviously causes the template creation to fail.

The same process worked fine for Centos-4.

I guess I have two options:

1) try and fix the problem
2) use the snapshot for FC5

Does anyone know if (1) is possible and if so how to do it?

Colin
