Hi there,

don't know if it's a bug or a feature But if you use vzmigrate it copies the vpsid.conf file but not the special files \*.start, \*.stop, \*.mount and \*.umount.

I think something like

```
for ext in mount umount start stop
do
if [ -e "$confdir/$VEID.$ext" ]; then
  if ! $SCP "$confdir/$VEID.$ext" "root@$host:$confdir/$VEID.$ext" &> $out; then
    log 1 "Failed to copy $VEID.$ext"
    exit $MIG_ERR_COPY
  fi
fi
done
```

should be added to vzmigrate. What do you think?

PS: The migration feature is awesome! Thanks a lot!
