Hi,

I'm running 2.6.18-53.1.13.el5.028stab053.10PAE on one of my server and once in a while, it starts becoming slow and unresponsive, and it comes back to normal after a reboot. That is really weird. One symptom is that when I execute "top" it takes a very long while to load, while "ps aux" is instant. No failcnt in user_beancounters.

Any idea?

HW: HP lpr2000 2x PIII Tualatin 1.13, 1.750 MB RAM.

Regards,
Ugo
