Hi Andrew,

Thank you for the review.

No, I hadn't consider using the percpu_counters infrastructure. But today when I tried using it, I got an early exception. I guess its because I tried calling percpu_counter_init from within sched_init, which I perhaps shouldn't do, because percpu_counter_init expects cpu hotplug code to be initialized by then. Right ? Correct me if I'm wrong.

How about we start collecting statistics at a later stage i.e, after percpu_counter becomes usable ?
