Subject: Clock in VPS loosing time quickly Posted by jarcher on Sun, 04 May 2008 07:02:07 GMT View Forum Message <> Reply to Message

Hi All...

I am running OpenVZ on a Debian server, uname -a returns:

2.6.18-fza-5-amd64 #1 SMP Thu Nov 1 16:15:07 UTC 2007 x86\_64 GNU/Linux

I am finding that my VPSs lose time very quickly. I have tried installing an NTP client but this does not seem to work properly. Is there a recommended way to keep my clocks set properly?

Thanks...
