
Subject: Clock in VPS loosing time quickly

Hi All...

I am running OpenVZ on a Debian server, uname -a returns:

```
2.6.18-fza-5-amd64 #1 SMP Thu Nov 1 16:15:07 UTC 2007 x86_64 GNU/Linux
```

I am finding that my VPSs lose time very quickly. I have tried installing an NTP client but this does not seem to work properly. Is there a recommended way to keep my clocks set properly?

Thanks...
