I have the same problem.

HN has IP 91.143.80.A
VN has 91.143.87.B

I did
ip r a 91.143.87.0/24 dev eth0
on HN, but my VN still can't ping it's gateway (91.143.87.1)

//edit: solved it with:
arping -S 91.143.83.B 91.143.83.1 on the HostNode
(so that is "arping -S <VN-IP> <gateway-IP>" on the HN)

morphium
