Hi.

I'm trying what you suggest here, but I don't make it to work.

My mount script:#!/bin/bash  
mount --bind '/vz/mounts/gridlog/psql' /vz/root/3000'/var/lib/pgsql'

All directories exist:\$ ls -lhd /vz/mounts/gridlog/psql /vz/root/var/lib/pgsql

```
drwxr-x--- 2 root root 4.0K May  7 19:40 /vz/mounts/gridlog/psql/  
drwxr-x--- 2 root root 4.0K May  7 20:45 /vz/root/3000/var/lib/pgsql/
```

But I get the following error if I try to start VE 3000:Quote:Starting VE ...  
mount: mount point /vz/root/3000/var/lib/pgsql does not existIt doesn't work if I replace /vz/root with /vz/private, or I change the permissions or I add '-n' to the mount invocation.

I'm using vzctl-3.0.22-1 . Any ideas?

Thanks a lot.
