
Subject: Infinite loop in __d_lookup ?

Posted by [Jakob Goldbach](#) on Mon, 12 May 2008 23:12:45 GMT

[View Forum Message](#) <> [Reply to Message](#)

Hi,

I regularly have processes that gets stuck eating all cpu. SysRq-p says it is stuck in __d_lookup+0x10b as seen in dmesg output below.

I run vanilla 2.6.18 with 028stab053 and the lustre filesystem. I also run lustre on non-openvz kernel without problems, hence this mail to this group.

I believe I've found where the problem is, but I'm not a kernel hacker so I don't know what to do about this information.

I'd appreciate any hints on what to do next to get this solved.

Below is what I could find out.

Thanks,
Jakob

gdb find that the process is in the hlist_for_each_entry_rcu loop:

```
(gdb) list *__d_lookup+0x10b
0x12f0 is in __d_lookup (fs/dcache.c:1153).
1148     struct dentry *dentry, *found;
1149
1150     rcu_read_lock();
1151
1152     found = NULL;
1153     hlist_for_each_entry_rcu(dentry, node, head, d_hash) {
1154         struct qstr *qstr;
1155
1156         if (dentry->d_name.hash != hash)
1157             continue;
```

I believe this is the relevant part (0x12f0) of the disassembled object:

```
12e0:  4d 8b 24 24      mov  (%r12),%r12
12e4:  4d 85 e4         test %r12,%r12
12e7:  74 2c           je   1315 <__d_lookup+0x130>
12e9:  49 8b 04 24      mov  (%r12),%rax
12ed:  0f 18 08        prefetcht0 (%rax)
12f0:  49 8d 5c 24 d8   lea  0xfffffffffd8(%r12),
%rbx
12f5:  8b 45 cc        mov  0xfffffffffcc(%rbp),
```

```
%eax
12f8: 39 43 40      cmp  %eax,0x40(%rbx)
12fb: 75 e3         jne  12e0 <__d_lookup+0xfb>
```

Dmesg after sysrq-p:

```
