In openVZ debian template /etc/network/interfaces.template file isn't necessary.

Dynamic creation of /etc/network/interfaces file is performed by

/etc/sysconfig/vz-scripts/dists/scripts/debian-add\_ip.sh script on host machine. So, please, edit this script by adding line

```
pre-up /etc/rc.firewall" >> ${CFGFILE}.bak
```

in appropriate place of the script.

/etc/rc.firewall should be inside VPS.

And, please, don't forget to delete etc/network/interfaces.template file inside VPS, otherwise you will have problems.

Good Luck.
