Hi Dave,

I was wondering if you could give me a little help.

I was following your instructions as you wrote them down- thank you.

However when I get to rpm-python-4.4.2-37.el5.i386.rpm I get the following error

error: Failed dependencies:

rpm = 4.4.2-47.el5 is needed by rpm-python-4.4.2-47.el5.i386

Since I am a newbie I was hoping that you and or someone can tell me what i am missing.
