Hello,

1. What about CONFIG_UBC_KEEP_UNUSED option? What kernel do you use?

2. After you've stopped your VE what column in /proc/user_beancounters [your VE statistics] is not zero.

2. You can compile kernel with CONFIG_UBC_DEBUG, CONFIG_UBC_DEBUG_KMEM options and then check some debug information in /proc/bc/VEID/ directory after your VE has stopped.
