hello,

we have a hardware node with two VZs, both are given this error when we try to connect with ftp:

Status: Connecting to xxx.xxx.xx.xxx ...

Status: Connected with xxx.xxx.xx.xxx Waiting for welcome message...

Response: 220 ProFTPD 1.3.1 Server ready.

Command: USER s5farol

Response: 331 Password required for s5farol

Command: PASS *****

Response: 230 User s5farol logged in

Command: SYST

Response: 215 UNIX Type: L8

Command: FEAT

Response: 211-Features:

Response: MDTM

Response: REST STREAM

Response: SIZE

Response: 211 End

Status: Connected

Status: Retrieving directory listing...

Command: PWD

Response: 257 "/" is the current directory

Command: TYPE A

Response: 200 Type set to A

Command: PASV

Response: 227 Entering Passive Mode (xxx.xxx.xx.xxx,139,44).

Command: LIST

Error: Transfer channel can't be opened.

Error: Could not retrieve directory listing

so the problem must be at the node.

any help to fix that?

thanks.
