hello,

we have a hardware node with two VZs, both are given this error when we try to connect with ftp:

```
Status: Connecting to xxx.xxx.xx.xxx ...
Status: Connected with xxx.xxx.xx.xxx Waiting for welcome message...
Response: 220 ProFTPD 1.3.1 Server ready.
Command: USER s5farol
Response: 331 Password required for s5farol
Command: PASS *****
Response: 230 User s5farol logged in
Command: SYST
Response: 215 UNIX Type: L8
Command: FEAT
Response: 211-Features:
Response: MDTM
Response: REST STREAM
Response: SIZE
Response: 211 End
Status: Connected
Status: Retrieving directory listing...
Command: PWD
Response: 257 "/" is the current directory
Command: TYPE A
Response: 200 Type set to A
Command: PASV
Response: 227 Entering Passive Mode (xxx.xxx.xx.xxx,139,44).
Command: LIST
Error: Transfer channel can't be opened.
Error: Could not retrieve directory listing
```

so the problem must be at the node.

any help to fix that?

thanks.
