Subject: Re: kernel panic with megaraid_sas-v00.00.03.16-1 patch
Posted by vaverin on Tue, 20 May 2008 12:23:22 GMT

1.gif shows the messages
megaraid_sas: disagrees about version of symbol struct_module
insmod /lib/megaraid_sas.ko: -1 Invalid module format.

These messages means that the module was re-build incorrectly (or may be it was compiled for some other kernel).

You need to rebuild it again. You can use auto-build again -- in this case I would like to look at the messages.
Also if you wish I can explain You how to re-build thsi module manually.

thank you,
Vasily Averin
