Ok.. lets state the problem. I am trying to run psybnc 2.3.2-7 and it works perfectly fine but sometimes, once in 2-3 weeks it stops responding but keeps on sitting online. None of my users can not connect to it and log into it.

kernel: 2.6.18-53.1.13.el5.028stab053.10PAE
Here is user_beancounters.

Version: 2.5

Anybody faced this problem before? I did try changing memory limits and even tried setting up everything to unlimit..
It happens on many HN servers and sometimes at the same time on all of them.

Thanks.
