Hello,

It might have been several reasons:

1. You had physically lack of memory on your HN.
2. The virtual address space was come to the end.
3. You have exceeded the number of map areas your process was allowed. (sysctl vm.max_map_count parameter). Information about map areas can be obtained via /proc/PID/maps
4. There was not appropriate "hole" in address space of particular process to place there additional map area.
