
Subject: Mounting OCFS2 in a VE?

I currently am trying to mount a OCFS2 disk with iSCSI in a VE. I am able to get it working correctly in a non-VE, but when I run the following command I get some errors:

```
# /etc/init.d/o2cb restart
```

```
Loading module "configfs": OK
```

```
Mounting configfs filesystem at /config: mount: unknown filesystem type 'configfs'
```

```
Unable to mount configfs filesystem
```

```
Failed
```

The OCFS2-Tools tries to mount a filesystem that the VE doesn't allow. The host node is able to mount it though.

Has anybody been successful with this before?
