I want my kernel to be x86_64. I did a yum upgrade and this is what happened.

```
[root@Char ~]# rpm -qa | grep kernel
kernel-2.6.18-8.el5
ovzkernel-2.6.18-53.1.6.el5.028stab053.6
kernel-headers-2.6.18-53.1.21.el5
ovzkernel-devel-2.6.18-53.1.19.el5.028stab053.14
ovzkernel-2.6.18-53.1.19.el5.028stab053.14
ovzkernel-2.6.18-53.1.13.el5.028stab053.10
ovzkernel-2.6.18-53.1.19.el5.028stab053.14
ovzkernel-2.6.18-53.1.13.el5.028stab053.10
ovzkernel-2.6.18-53.1.6.el5.028stab053.6
ovzkernel-devel-2.6.18-53.1.19.el5.028stab053.14
```

Should I remove the rpms for all of the duplicates, but appending .i386 to the end if I want to remove all i386 kernels, leaving only x64 ones?
