Hello

is it possible to set the kernel name a VE get for the "uname" call?
There seams to be a bug in the oracle installer with long kernel names
and we try to test if this is still the case for our oracle 11g client
setup dying with segmentation fault inside the VE
Link to (possible) Oracle Bug :
http://kevinclosson.wordpress.com/2007/04/18/dont-install-oracle-on-linux-servers-with-long-kernel-names/

Thanks

Andreas
