Hello

is it possible to set the kernel name a VE get for the "uname" call?

There seams to be a bug in the oracle installer with long kernel names

and we try to test if this is still the case for our oracle 11g client

setup dying with segmentation fault inside the VE

Link to (possible) Oracle Bug :

<http://kevinclosson.wordpress.com/2007/04/18/dont-install-oracle-on-linux-servers-with-long-kernel-names/>

Thanks

Andreas
