Hi,

Quote:

i moved the vz to vz2/private/102/

What does it mean? Did you move the whole /vz partition or just moved /vz/private/102 files to /vz2/private/102 and then change VE\_PRIVATE parameter in /etc/vz/conf/102.conf file? Could you possibly show 102.conf file?

Did you start then the VE and just issue on the HN (vzyum 102 instal libssl)?
