Hi

I have installed OpenVZ on a Fedora 8.

When I run the command vzctl I get:

```
bash: vzctl: command not found
```

the uname -a returns:

```
Linux myhostname 2.6.18-53.1.19.el5.028stab053.14 #1 SMP Thu May 8 20:43:27 MSD 2008  
i686 i686 i386 GNU/Linux
```

I've already installed vzctl & vzquota using yum but I don't know if I've booted into the right kernel or not.

I'm a newbie in openvz. Could you please tell me what's wrong.

Thanks

Mojiz
