
Subject: Accessing PCI Devices from VE

Could you tell me whether OpenVZ supports accessing physical devices on the Host from the VE?

The plan is, amongst other things, to setup an Asterisk container and if I need to perform any system upgrades, I envisage just swapping migrating the container to another host.

It's a home network only so...

But lspci seems not to work. Should it?

pcilib: Cannot open /proc/bus/pci
lspci: Cannot find any working access method.

What can I do to get this working then?

Thanks
Simon
