Hi,

http://forum.openvz.org/index.php?t=tree&goto=27545&#msg_27545

Have you read?

This information will be useful:

- 1) "ip a l" (from HN and from VE)
- 2) "ip r l" (from HN and from VE)
- 3) sysctl parameters (/etc/sysctl.conf)
- 4) "arp -n" from HN
- 5) tcpdump output:

ping from inside the VE: ping x.x.x.x and at the same moment issue "tcpdump" on the HN and inside the VE.
