I just update to latest git (commit  
da8a02e8fc4f14f976d38c844b6e5d98badea9eb), and it works again.

Well, just tell me how i extract that kernel log from the console (no  
digicam here, and log is too long for the screen, so ist only partially  
displayed - and no entries in syslog)?
