I tried with this:

```
#iptables -t nat -A PREROUTING -p tcp -d xxx.yyy.zzz.aaa --dport 80 -j DNAT --to-destination 192.168.9.1-10.168.9.250
```

where xxx.yyy.zzz.aaa is the external IP of the HN. Yet I could not access the embedded http server in IP phones nor any other machines with 192.168.9.0/24 range from outside.
