Subject: Re: openvz and openafs Posted by liamr on Fri, 12 May 2006 19:21:16 GMT View Forum Message <> Reply to Message

I have to admit I'm not a C programmer.. and I'm certainly not a kernel programmer.

What's the difference between the for_each_process_all() and for_each_process_ve() calls? The guy who made our patch pretty much replaced all occurrances of for_each_process() w/ for_each_process_all().

I'm wondering if some of them should have been for_each_process_ve() instead?
