I noticed something strange.

This is taken from within the VE:

6.1G /var/www/virtual/

Then I do "df -h":

Filesystem	Size	Used	Avail	Use%	Mounted on
/dev/simfs	44G	5.1G	35G	13%	/
tmpfs	503M	0	503M	0%	/lib/init/rw
tmpfs	503M	0	503M	0%	/dev/shm

It looks like df doesn't give me the correct answer.
