Dear Friends,

I need to

- 1) Install openVZ will i get a Control panel for mine clients
- 2) make an exact copy of the VPS from old to new IPs. Tell me how to do so.
- 3) Also can anyone point me to articles relating with the difference between OpenVZ and Xen based VPS., I need to know which is best, in terms of which can be installed easily, control panel for the client and ease to use/operate and system resources etc.

Thanks,

Abhishek jain
