ok thanks for the info , I have a few more questions:

1)I am running RHEL 4.x on the server . What will be the OS for mine VPS i create on this server.

2)I already have some files to and some important databases on this VPS what will happen to those files once i create VPS or install openVZ.

3)What will happen to the IPs , specificaly to the main IP. I mean once i install openVZ will mine RHEL 4.x stop to work and i will need to create the VPSes for it to work and mine mian IP will be there to configure VPS only.

Also apart from the instal;lation guide available on site

[http://openvz.org/documentation/guides/installation/quick-in stall](http://openvz.org/documentation/guides/installation/quick-in%20stall) , does anyone have some notes for easy installation. pl provide them that will be handy.

Pl. provide the info.

Thanks,
Abhishek jain
