---

hello. i'm tried install kernel 2.6.24-openvz-24-004.1d1-686 in domU and got error:  
"(2, 'Invalid kernel', 'xc\_dom\_find\_loader: no loader found\n') " This kernel not support domU in  
xen? If not, where download config's kernel ovzkernel-xen-\*.rpm and patches for compile in  
debian package.

I was looking at download.openvz.org and so did not find these patches and configs.
