Hi all,

In Proxmox VE we want to support multiple bridges. I currently use a patch which adds an bridge parameter to the netif options:

```
NETIF="ifname=XXX,bridge=XXX,mac=XXX,host_ifname=XXX,host_mac=XXX"
```

```
--netif_add ifname[,mac,host_ifname,host_mac,bridge]
```

I also modified --netif\_add to accept empty parameters, for example:

```
--netif_add eth3,,,vmbr3
```

I wonder if we can include that into the vzctl release - I will post the patch if somebody is interested.

- Dietmar
