Mike, thank you for the access, i've got the reason - you have tried to install an OVZ kernel of different architecture than the OS itself. And now you have some mix of arches. Look:

```
[root@aaa ~]# rpm -qa --queryformat "%{name} %{version} %{release} %{arch}\n" | grep kernel
kernel-headers 2.6.18 92.1.6.el5 x86_64
kernel 2.6.18 53.el5 x86_64
kernel-devel 2.6.18 53.1.21.el5 x86_64
ovzkernel-devel 2.6.18 53.1.19.el5.028stab053.14 x86_64
ovzkernel 2.6.18 53.1.19.el5.028stab053.14 x86_64
kernel 2.6.18 53.1.21.el5 x86_64
kernel 2.6.20 ovz007.1 x86_64
kernel-devel 2.6.18 92.1.6.el5 x86_64
ovzkernel 2.6.18 53.1.19.el5.028stab053.14 i686
[root@aaa ~]# rpm -qa --queryformat "%{name} %{version} %{release} %{arch}\n" | grep vzctl
vzctl-lib 3.0.22 1 i386
vzctl 3.0.22 1 i386
vzctl-lib 3.0.22 1 x86_64
vzctl 3.0.22 1 x86_64
[root@aaa ~]# rpm -qa --queryformat "%{name} %{version} %{release} %{arch}\n" | grep quota
quota 3.13 1.2.3.2.el5 x86_64
vzquota 3.0.11 1 x86_64
vzquota 3.0.11 1 i386
```

Please, remove i386 arch rpms and reinstall 64bit ones - this should help.

---

Regards,  
Konstantin
