I created a VPS with unlimited resources but it shows the limit of hard disk. Is there any limit for the VPS file system? There is enough free space in the server

df -m

| Filesystem | 1M-blocks | Used | Available | Use% | Mounted on |
|---------------------------------|-----------|-------|-----------|------|------------|
| /dev/mapper/VolGroup00-LogVol00 | 921970 | 74425 | 799957 | 9% | / |
| /dev/hda1 | 99 | 52 | 43 | 56% | /boot |
| tmpfs | 4054 | 0 | 4054 | 0% | /dev/shm |

uname -a

2.6.18-53.1.19.el5.028stab053.14PAE #1 SMP Thu May 8 21:09:32 MSD 2008 i686 i686 i386
GNU/Linux

But when I run the df -h

df -h

| Filesystem | Size | Used | Avail | Use% | Mounted on |
|------------|------|------|-------|------|------------|
| /dev/simfs | 98G | 6.8G | 91G | 7% | / |
| none | 4.0G | 20K | 4.0G | 1% | /dev |
| /tmp | 98G | 6.8G | 91G | 7% | /var/tmp |

Is 98G max disk a VPS can see or it's the max space for all the VPS in server?
How can we create the VPS with more then 100gigs?

Thanks
