
Subject: LVS (ip_vs) inside VE?

Hello,

I'm currently running a bunch of virtual hosts on openvz, including routers and firewalls (multiple bridge configuration, nat, policy routing etc.) and this work great.

On HN I have ip_vs* modules loaded but VE can't see such modules or /proc/net/ip_vs*.

I checked this on 2.6.24-ovz005.1 and 2.6.18-53.1.19.el5.028stab053.14.

Is there a possibility to run LVS inside container?

Best regards

Marek
