
Subject: sysctl to hide VE processes from HN ps?

I was glad to hear about bug 511. I am running 2.6.24-ovz005 and was surprised to see that I had this great new feature.

But it doesn't seem to be working. Maybe I'm doing it wrong?

```
# sysctl kernel.pid_ns_hide_child=1
```

A 'ps ax' or 'ls /proc' shows the same thing regardless of this setting: VPSs' PostgreSQL and httpd and so on.
