Hello,

Quote:

I found no trace of envID

Please show the output of the following commands (just to clarify the situation)  
from HN:

```
cat /proc/self/status | grep -i env
```

```
vzctl exec VE_ID cat /proc/self/status | grep -i env
```

Quote:

My kernel (compiled by myself based on the gentoo openvz kernel)

- what does it mean "gentoo openvz kernel"?
- could you possibly describe in more detail where have you got your kernel and if it is possible attach here .config file from your kernel.
- have patched your kernel or made any sort of corrections?

Thank You!
